Summary Description (including operational impact)

Observed large dark gray horizontal object suspended stationary in sky just below cloud level (clouds were low) approx 200-300 ft above water. Object was very large, looked to be about 100-150 ft long or more. About 1-3 km offshore. It was not flying or moving, just resting. Visual observation looked like metal, had various angles and appendages on upper side. At first peripheral glance I thought it was a ship (ie a shipping boat coming into port) but it was too high. It was suspended in the air, motionless. The sky was absolutely clear except for some stratified low hanging clouds. The object was entirely visible in visual range. I took photos and inadvertently a short video about 2 km or so past that point from the Burlington bridge. But they are not incredibly detailed. I can submit them if it helps. I thought I should make a report of a Unknown Aerial Phenomenon (UAP) (UFO) considering unusualness of the incident. I am trained to report on visuals without judgment and my perceptual spatial skills are very high. Later when I took the photos there was a boat approaching the object, though the object was still a distance away. Marinas are closed so it might have been a federal nav vessel or a police boat at they both have units near the harbour.
